Add Sfjbs's products to cart right now, From 700-846 study dump, you can study the professional knowledge, useful exam tips and some good learning methods.

NEW QUESTION: 1
Which three statements about IS-IS are true? (Choose three.)
A. IS-IS has the capability to provide address summarization between areas.
B. IS-IS can be used to route both IP and CLNP.
C. IS-IS has three different levels of authentication: interface level, process level, and domain level.
D. IS-IS is an IETF standard.
E. IS-IS can be used only in the service provider network.
F. IS-IS is a Cisco proprietary routing protocol.
Answer: A,B,C
Explanation:
Intermediate System to Intermediate System (IS-IS) was designed as the routing protocol for ISO's CLNP described in
IS0 10589. IS-IS is a Link State routing protocol akin to OSPF and was developed by DEC for use with DECnet Phase V.
It was originally thought that TCP/IP would gradually make way for the seven layer OSI architecture so an enhancement to IS-IS was developed called Integrated IS-IS also known as Dual IS-IS that could route both Connectionless-Mode
Network Service (CLNS) as well as IP.

Cisco IOS supports IS-IS authentication on 3 different levels;
between neighbors, area-wide, and domain-wide, where each can
be used by themselves or together.
summary-address address mask {level-1 | level-1-2 | level-2} is
used to configure IP address summarization.
