An organization uses an Active Directory Rights Management Services (AD RMS) cluster named RMS1 to protect content for a project. You uninstall AD RMS when the project is complete. You need to ensure that the protected content is still available after AD RMS is uninstalled.

Solution: You run the following command from an administrative command prompt:

```
cipher /a /d /s:<protected share name>
```

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

If you plan to remove Active Directory Rights Management Services from your organization, you should first decommission the AD RMS cluster.
