- E. FTP uses a UDP port for communication.

Answer: B,C,D

NEW QUESTION: 2

Scenario: A company is planning to migrate its on-premises Microsoft SQL Server 2016 Standard Edition server to a cloud environment. The company has a large amount of data and is concerned about the time and cost of the migration. The company is considering using Azure Data Factory to migrate the data to Azure SQL Database. The company is also considering using Azure Data Lake Storage to store the data. The company is also considering using Azure Synapse Analytics to analyze the data. The company is also considering using Azure Machine Learning to build machine learning models on the data. The company is also considering using Azure Cognitive Services to build cognitive applications on the data. The company is also considering using Azure IoT Hub to connect IoT devices to the cloud. The company is also considering using Azure DevOps to manage the development and deployment of applications. The company is also considering using Azure Active Directory to manage user access to the cloud. The company is also considering using Azure Key Vault to manage secrets and keys. The company is also considering using Azure Monitor to monitor the performance and health of the cloud resources. The company is also considering using Azure Security Center to assess and improve the security of the cloud resources. The company is also considering using Azure Backup to backup the data in the cloud. The company is also considering using Azure Site Recovery to protect the data in the cloud. The company is also considering using Azure Policy to enforce the company's governance policies in the cloud. The company is also considering using Azure Resource Manager to manage the cloud resources. The company is also considering using Azure Cloud Shell to access the cloud resources. The company is also considering using Azure Cloud Explorer to explore the cloud resources. The company is also considering using Azure Cloud Shell to access the cloud resources. The company is also considering using Azure Cloud Explorer to explore the cloud resources.

- A. Azure Data Factory
- B. Azure Data Lake Storage
- C. Azure Synapse Analytics
- D. Azure Machine Learning

Answer: C

NEW QUESTION: 3

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You are examining information about users, sessions, and processes in an on-premises Microsoft SQL Server 2016 Standard Edition server.

You need to identify waits for resources and return only the following information:

a list of all databases on the SQL Server instance, along with information about the database files, their paths, and names a list of the queries recently executed that use most of memory, disk, and network resources What should you use?

- A. SQL Server Data Tools (SSDT)
- B. Sp_who3
- C. SQL Server Data Collector
- D. Activity Monitor
- E. SQL Server Configuration Manager
- F. SQL Server Management Studio (SSMS) Object Explorer

Answer: A

Explanation:

SQL Server Data Tools (SSDT) is a Microsoft Visual Studio environment for creating business intelligence solutions. SSDT features the Report Designer authoring environment, where you can open, modify, preview, save, and deploy Reporting Services paginated report definitions, shared data sources, shared datasets, and report parts.
