**NEW QUESTION: 1**

What is the main criteria for separating training and test data when training a machine learning system?

- A. The data set should be representative and randomly split in to a training set and a test set so that they do not overlap.
- B. Training data should be as random as possible, in order to create a robust model.
- C. Training data should be random, but the test data should be created by a subject matter expert.
- D. Test data should be as random as possible, so that it tests the boundaries of the system.

**Answer: B**

**NEW QUESTION: 2**

An agile team has been given a complex project with a basic set of requirements which need further elaboration and review. How should the team iteratively build out the backlog of requirements with the stakeholders?

- A. Have the product owner fill out the requirements backlog.
- B. Have the stakeholders fill out the backlog before starting the project.
- C. Conduct a requirements gathering workshop.
- D. Deliver the basic requirements iteratively.

**Answer: D**

**NEW QUESTION: 3**

DRAG DROP

You administer a Microsoft SQL Server database.

Every Sunday afternoon, a process inserts a large volume of data. Users generate reports and modify additional data throughout the week.

You need to create a backup strategy that:  
minimizes the size of the transaction log,  
minimizes the size of the backups, and  
ensures a 24-hour recovery point objective (RPO).

Which strategy or strategies should you use? (To answer, drag the appropriate strategy or strategies to their corresponding task or tasks in the answer area. Answer choices may be used once, more than once, or not at all. Answer targets may be used once or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.)

**Answer:**

Explanation:

Recovery Model: Full recovery model

Only the Full recovery model provides a 24-hour recovery point objective.

Sunday backup: Full backup

Nightly backup: Transactional log backup
