Answer: D

Explanation:

With compliance inheritance, the cloud provider's infrastructure is out of scope for a customer's compliance audit, but everything the customer configures and builds on top of the certified services is still within scope.

NEW QUESTION: 3

You want to make a copy of a production Linux virtual machine in the US-Central region. You want to manage and replace the copy easily if there are changes on the production virtual machine. You will deploy the copy as a new instance in a different project in the US-East region.

What steps must you take?

A. Create a snapshot of the root disk and select the snapshot as the root disk when you create a new virtual machine instance in the US-East region.

B. Use the Linux dd and netcat commands to copy and stream the root disk contents to a new virtual machine instance in the US-East region.

C. Create an image file from the root disk with Linux dd command, create a new disk from the image file, and use it to create a new virtual machine instance in the US-East region.

D. Create a snapshot of the root disk, create an image file in Google Cloud Storage from the snapshot, and create a new virtual machine instance in the US-East region using the image file for the root disk.

Answer: D

Explanation:

A) This approach affects performance of the existing machine and incurs significant network costs.

B) This approach does not allow you to create the VM in the new project since snapshots are limited to the project in which they are taken.

C) dd will not work correctly on a mounted disk.

D) (Correct Answer) - This approach meets all of the requirements, it is easy to do and works cross project and

cross region.

NEW QUESTION: 4

Your company has offices in several countries. You must test and validate all operating system images before you deploy them.

You create a Windows 7 Enterprise master image that has all language packs installed. You test and validate the master image.

You are planning to create regional images based on the master image. Each regional image will contain only the language pack that is necessary for a specific geographic region.

You have the following requirements:

Remove the language packs that are unnecessary for each region. Minimize the necessary testing and validation.

You need to create the regional images.

What should you do?

- A.** Deploy the master image to a target computer. Remove the unnecessary language packs, and then capture each regional image.
- B.** Service the master image offline by using the Deployment Image Servicing and Management (DISM) tool.
- C.** Run `lpksetup.exe /u` in unattended mode on the master image.
- D.** Service the master image online by using the Deployment Image Servicing and Management (DISM) tool.

Answer: B

Explanation:

Deployment Image Servicing and Management (DISM) tool
Image servicing and management solutions fall into two main categories:

Managing the data or information included in the Windows image, such as enumerating or taking an inventory of the components, updates, drivers, or applications contained in an image.

Servicing the image itself, including adding or removing driver packages and drivers, modifying language settings, enabling or disabling Windows features, and upgrading to a higher edition of Windows.
