We don't know how many VLANs exist in this switch -> The bridge priority of this switch is 24606 which is lower than the default value bridge priority 32768. All three interfaces on this switch have the connection type "p2p", which means Point-to-point environment - not a shared media. The only thing we can specify is this switch is the root bridge for VLAN 30 but we can not guarantee it is also the root bridge for other VLANs.
