- A.** Request a certificate for each FQDN using AWS Certificate Manager. Associate the certificates with the ALBs in both the primary and secondary AWS Regions.
- B.** Request certificates for each FQDN in both the primary and secondary AWS Regions using AWS Certificate Manager. Associate the certificates with the corresponding ALBs in each AWS Region.
- C.** Generate the key pairs and certificate requests for each FQDN using AWS KMS. Associate the certificates with the ALBs in both the primary and secondary AWS Regions.
- D.** Request a certificate for each FQDN using AWS KMS. Associate the certificates with the ALBs in the primary AWS Region. Enable cross-region availability in AWS KMS for the certificates and associate the certificates with the ALBs in the secondary AWS Region.

Answer: B

Explanation:

Explanation

<https://docs.aws.amazon.com/acm/latest/userguide/acm-regions.html>

Certificates in ACM are regional resources. To use a certificate with Elastic Load Balancing for the same fully qualified domain name (FQDN) or set of FQDNs in more than one AWS region, you must request or import a certificate for each region. For certificates provided by ACM, this means you must revalidate each domain name in the certificate for each region. You cannot copy a certificate between regions.

NEW QUESTION: 3

What is the minimum size requirement for swap space on a Solaris 10 OS for the system to boot properly?

- A.** equal to the amount of physical RAM
- B.** one half the amount of physical RAM
- C.** zero
- D.** twice the amount of physical RAM

Answer: C

NEW QUESTION: 4

HOTSPOT

You have 20 Azure virtual machines that run Windows Server 2016 based on a custom virtual machine image.

Each virtual machine hosts an instance of a VSS-capable web app that was developed in-house. Each instance is accessed by using a public endpoint. Each instance uses a separate database. The average database size is 200 GB.

You need to design a disaster recovery solution for individual instances. The solution must meet the following requirements:

- * Provide a recovery time objective (RTO) of six hours
- * Provide a recovery point objective (RPO) of eight hours
- * Support recovery to a different Azure region
- * Support VSS-based backups
- * Minimize costs

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:
