And you will find that you can receive the CPUX-F learning prep in a few minutes, As we all know, the candidates for ISQI CPUX-F exam test are with various levels.

We can promise that our study materials **CPUX-F Examcollection Vce** will be very useful and helpful for you to prepare for your exam.

NEW QUESTION: 1

You have a server named Server1 that has 16 processors. You plan to deploy multiple instances of SQL Server 2014 to Server1.

You need to recommend a method to allocate processors to each instance.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Windows System Resource Manager (WSRM)
- B. Max Degree of Parallelism
- C. Processor affinity
- D. Resource Governor

Answer: C

Explanation:

CPU affinity management through Windows System Resource Manager is

not recommended for SQL Server multi-instance management.

Instead, use the processor affinity settings in SQL Server.

Server Properties (Processors Page)

NEW QUESTION: 2

Which three tasks can be automatically performed by the Automatic Data Optimization feature of Information Lifecycle Management (ILM)?

- A. tracking the most recent read time for a table segment in the sysauxtablespace
- B. tracking the most recent write time for a table segment in a user tablespace
- C. tracking insert time by row for table rows
- D. tracking the most recent read time for a table segment in a user tablespace
- E. tracking the most recent write time for each block in a table segment
- F. tracking the most recent write time for a table segment in the sysauxtablespace

Answer: B,D,E

NEW QUESTION: 3

A company deployed a three-tier web application in two regions: us-east-1 and eu-west-1. The application must be active in both regions at the same time. The database tier of the application uses a single Amazon RDS Aurora database globally, with a master in us-east-1 and a read replica in eu-west-1. Both regions are connected by a VPN.

The company wants to ensure that the application remains available even in the event of a region-level failure of all of the application's components. It is acceptable for the application to be in read-only mode for up to 1 hour. The company plans to configure two Amazon Route 53 record sets, one for each of the regions.

How should the company complete the configuration to meet its

requirements while providing the lowest latency for the application end-users? (Choose two.)

A. Configure an Amazon RDS event notifications to react to the failure of the database in us-east-1 by invoking an AWS Lambda function that promotes the read replica in eu-west-1.

<https://docs.aws.amazon.com/lambda/latest/dg/services-rds.html>

B. Use weighted routing and configure each record set with a weight of 50. Configure an HTTP health check for each region, and attach it to the record set for that region.

C. Configure an Amazon CloudWatch alarm for the health checks in us-east-1, and have it invoke an AWS Lambda function that promotes the read replica in eu-west-1.

D. Use latency-based routing for both record sets. Configure a health check for each region and attach it to the record set for that region.

E. Use failover routing and configure the us-east-1 record set as primary and the eu-west-1 record set as secondary. Configure an HTTP health check for the web application in us-east-1, and associate it to the us-east-1 record set.

Answer: C,D
