Explanation:

Section 4: Sec Four (60 to 66) Details: Litware, Inc Case B Overview You are a database administrator for a company named Litware, Inc. Litware is a book publishing house. Litware has a main office and a branch office. You are designing the database infrastructure to support a new web-based application that is being developed. The web application will be accessed at www.litwareinc.com. Both internal employees and external partners will use the application. You have an existing desktop application that uses a SQL Server 2005 database named Appl_DB. Appl_Db will remain in production. Requirements Planned Changes You plan to deploy a SQL Server 2012 instance that will contain two databases named Database1 and Database2. Database1 will contain two tables named Orders and OrderDetails. Database1 will also contain a stored procedure named usp_UpdateOrderDetails. The stored procedure is used to update order information. The stored procedure queries the Orders table twice each time the procedure executes. Each query against the Orders table must return the same data. All statements in the stored procedure run in a single transaction. Database1 will contain several queries that access data in the Database2 tables. Database2 will contain a table named Inventory. Inventory will contain over 100 GB of data. The Inventory table will have two indexes: a clustered index on the primary key and a nonclustered index. The column that is used as the primary key will use the identity property. Database2 will contain a table named Inventory. Inventory will contain over 100 GB of data. The Inventory table will have two indexes:

- A. Option A
 - B. Option B
 - C. Option C
 - D. Option D
