**NEW QUESTION: 2**

This question consists of two statements: One is named Assertion and the other is named Reason. Both of these statements may be true; both may be false; or one may be true, while the other may be false.

To answer this question, you must first evaluate whether each statement is true on its own. If both statements are true, then you must evaluate whether the Reason (the second statement) correctly explains the Assertion (the first statement). You will then select the answer from the list of answer choices that matches your evaluation of the two statements.

Assertion:

DHCP failover clustering provides load balancing when you use multiple DHCP servers to distribute IP addresses to the network clients. Clients can renew their IP leases even if some of the DHCP servers become unavailable. DHCP failover clustering supports stateless and stateful IPv4 and IPv6 IP addresses, as well as DHCP policies and filtering.

Reason:

The cluster health monitoring mechanism ensures the fault tolerance of the DHCP service and all configured DHCP settings. It also protects the DHCP database from failures and corruptions.

Evaluate the Assertion and Reason statements and choose the correct answer option.

- A. The Assertion is false, but the Reason is true.
- B. The Assertion is true, but the Reason is false.
- C. Both the Assertion and Reason are true, and the Reason is the correct explanation for the Assertion
- D. Both the Assertion and the Reason are false.
- E. Both the Assertion and Reason are true, but the Reason is not the correct explanation for the Assertion.

**Answer: D**

Explanation:

\* The assertion is false.

DHCP failover cluster does not provide load balancing. It places the DHCP server in a cluster with an additional server configured with the DHCP service that assumes the load if the primary DHCP server fails.

\* The reason is false.

The cluster health monitoring mechanism is known as the cluster heartbeat. The heartbeat detects if a cluster node is down, but it does not help in protecting the DHCP databases.
