**NEW QUESTION: 2**

You have an on-premises Microsoft SQL Server named Server1. You provision a Microsoft Azure SQL Database server named Server2.

On Server1, you create a database named DB1. You need to enable the Stretch Database feature for DB1. Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation

Step 1: Enable the remote data archive option in DB1

Prerequisite: Enable Stretch Database on the server

Before you can enable Stretch Database on a database or a table, you have to enable it on the local server. To enable Stretch Database on the server manually, run sp\_configure and turn on the remote data archive option.

Step 2: Create a firewall rule in Azure

On the Azure server, create a firewall rule with the IP address range of the SQL Server that lets SQL Server communicate with the remote server.

Step 3: Create a master key in the master database

To configure a SQL Server database for Stretch Database, the database has to have a database master key. The database master key secures the credentials that Stretch Database uses to connect to the remote database.

Step 4: Create a database scoped credential for authentication to Azure When you configure a database for Stretch Database, you have to provide a credential for Stretch Database to use for communication between the on premises SQL Server and the remote Azure server. You have two options.

Step 5: Create a server-level credential for authentication to Azure.

To configure a database for Stretch Database, run the ALTER

DATABASE command.

For the SERVER argument, provide the name of an existing Azure server, including the

.database.windows.net portion of the name - for example, MyStretchDatabaseServer.database.windows.net.

Provide an existing administrator credential with the CREDENTIAL argument, or specify FEDERATED\_SERVICE\_ACCOUNT = ON. The following example provides an existing credential.

```
ALTER DATABASE &lt;database name&gt;  
SET REMOTE_DATA_ARCHIVE = ON  
(  
SERVER = '&lt;server_name&gt;' ,  
CREDENTIAL = &lt;db_scoped_credential_name&gt;  
) ;  
GO
```
