If OSPF is implemented on the network, which additional configuration is needed to allow traffic from host 10.4.1.15/24 to host 10.1.2.20/24?

A. A virtual link between router 3 and router 4

B. The current design allows traffic between the two hosts.

- C. A virtual link between router 2 and router 3
- D. A virtual link between router 2 and router 4

Answer: B

Explanation:

This specific traffic from 10.4.1.0/24 to 10.1.2.0/24 would work because this traffic crosses only over the single OSPF area of 0.0.0.1.

However, traffic from hosts on R4 to R1 would indeed need a virtual link, since area 0.0.0.2 is not connected to the backbone area of 0.0.0.0.
