- C. You should create a leave and absence type, and ask the employees to select the type when requesting time off.
- D. You should create a leave and absence type and leave and absence plan, and assign the leave and absence plan to the appropriate employees.

Answer: B

NEW QUESTION: 2

You are investigating issues with two gateway cluster members that are not able to establish the first initial cluster synchronization. What service is used by the FWD daemon to do a Full Synchronization?

- A. TCP port 257
- B. TCP port 443
- C. TCP port 256
- D. UDP port 8116

Answer: C

Explanation:

Synchronization works in two modes:

Full sync transfers all Security Gateway kernel table information from one cluster member to another. It is handled by the fwd daemon using an encrypted TCP connection.

Delta sync transfers changes in the kernel tables between cluster members. Delta sync is handled by the Security Gateway kernel using UDP multicast or broadcast on port 8116.

Full sync is used for initial transfers of state information, for many thousands of connections. If a cluster member is brought up after being down, it will perform full sync. After all members are synchronized, only updates are transferred via delta sync. Delta sync is quicker than full sync.
