NEW QUESTION: 1

Your company's site to site VPN tunnel has been established, however, some or all of the traffic is being dropped. Which one of the commands below could be used in troubleshooting the issue?

NuGet and Maven are public package managers that support multiple feeds.

Step 2: Create an Azure Artifacts feed that uses upstream sources

If you want to use packages from multiple feeds, use upstream sources to bring packages from multiple feeds together into a single feed.

Step 3: Create a Microsoft Visual Studio project that includes all the packages Consume NuGet packages from upstream sources: Now you can open Visual Studio and install packages from the upstream sources you just configured.

<https://docs.microsoft.com/en-us/azure/devops/artifacts/how-to/set-up-upstream-sources>

NEW QUESTION: 4

Which type of mirroring does SPAN technology perform?

- A. Remote mirroring over Layer 2
- B. Local mirroring over Layer 2
- C. Local mirroring over Layer 3
- D. Remote mirroring over Layer 3

Answer: B

Explanation:

You can analyze network traffic passing through ports or VLANs by using SPAN or RSPAN to send a copy of the traffic to another port on the switch or on another switch that has been connected to a network analyzer or other monitoring or security device. Local SPAN supports a SPAN session entirely within one switch; all source ports or source VLANs and destination ports are in the same switch or switch stack.

Each local SPAN session or RSPAN destination session must have a destination port (also called a monitoring port) that receives a copy of traffic from the source ports or VLANs and sends the SPAN packets to the user, usually a network analyzer: + If ingress traffic forwarding is enabled for a network security device, the destination port forwards traffic at Layer 2.
