NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains four global groups named Group1, Group2, Group3, and Group4. A user named User1 is a member of Group3. You have an organizational unit named OU1 that contains computer accounts. A group policy object named GPO1 is linked to OU1. OU1 contains a computer account named Computer1. In GPO1, the assignment of user rights is configured as follows:

You must ensure that User1 can access the shares on Computer1 from the network. What should you do?

- A. Change the user rights assignment for Local Users to Deny.
- B. Change the user rights assignment for Network Users to Deny.
- C. Change the user rights assignment for Group1 to Allow.
- D. Change the user rights assignment for GPO1 to Allow on Computer1.

Answer: D

Explanation:

You need to ensure that User1 can access the shares on Computer1, from network.

If not from network, where would you access a shared folder from? from Mars? from Space? from toilet?

Moreover, this question has explicitly state User1 is a member of Group3, and hence it is not possible for User1 to logon Computer1 locally to touch those shared folders on NTFS file system.

Only these two policies to be considered "Access this computer from network", "Deny access to this computer from network". There's no option to modify the group membership of "Group2", "Administrators", or "Backup Operators", so we have to add a 4th entry "User1" to this policy setting "Access this computer from network".
