What are three BGP configuration characteristics of a multihomed customer that is connected to multiple service providers? (Choose three.)
A. The multihomed customer has to decide whether to perform load sharing or use a primary/backup implementation
B. The multihomed customer announces its assigned IP address space to its service providers through BGP
C. The multihomed customer can use local preference to influence the return traffic from the service providers
D. The multihomed customer configures outbound route filters to

prevent itself from
becoming a transit AS
E. The multihomed customer must use private AS number
Answer: A,B,D

NEW QUESTION: 2
HOTSPOT
Your network contains one Active Directory domain named
contoso.com. The domain contains 10 file servers that run
Windows Server 2012 R2.
You plan to enable BitLocker Drive Encryption (BitLocker) for
the for the operating system drives of the file servers.
You need to configure BitLocker policies for the file servers
to meet the following requirements:
- Ensure that all of the servers use a startup PIN for
operating system drives encrypted with BitLocker. - Ensure that
the BitLocker recovery key and recovery password are stored in
Active Directory.
Which two Group Policy settings should you configure? To
answer, select the appropriate settings in the answer area.

Answer:
Explanation:

Explanation:

Choice 1: Require additional authentication at startup Choice
2: Choose how BitLocker-protected operating system drives can
be recovered
* Choice 1: Require additional authentication at startup This
policy setting is used to control which unlock options are
available for operating system drives. You can set this option
to Require startup PIN with TPM Choice 2: Choose how
BitLocker-protected operating system drives can be recovered
This policy setting is used to configure recovery methods for
operating system drives. In Save BitLocker recovery information
to Active Directory Domain Services, choose which BitLocker
recovery information to store in Active Directory Domain
Services (AD DS) for operating system drives. If you select
Store recovery password and key packages, the BitLocker
recovery password and the key package are stored in AD DS.
Storing the key package supports recovering data from a drive
that is physically corrupted. If you select Store recovery
password only, only the recovery password is stored in AD DS.

NEW QUESTION: 3
A network is designed to use OSPF to reach eBGP peers. For eBGP
peers to stay stable in case of a link failure, what condition
should be avoided?

A. Advertise IP addresses used on eBGP peer statements via eBGP
B. Disable BGP synchronization
C. Use an ACL to block BGP in one direction
D. Advertise IP addresses used on eBGP statemets via a normal OSPF area
Answer: A

NEW QUESTION: 4
Ferris Plastics, Inc. is a medium sized company, with an enterprise network (access, distribution and core switches) that provides LAN connectivity from user PCs to corporate servers. The distribution switches are configured to use HSRP to provide a high availability solution.
* DSW1 -primary device for VLAN 101 VLAN 102 and VLAN 105
* DSW2 - primary device for VLAN 103 and VLAN 104
* A failure of GigabitEthemet1/0/1 on primary device should cause the primary device to release its status as the primary device, unless GigabitEthernet1/0/1 on backup device has also failed.
Troubleshooting has identified several issues. Currently all interfaces are up. Using the running configurations and show commands, you have been asked to investigate and respond to the following question.

During routine maintenance, it became necessary to shut down the GigabitEthernet1/0/1 interface on DSW1.
All other interfaces were up. During this time, DSW1 remained the active device for the VLAN 102 HSRP group. You have determined that there is an issue with the decrement value in the track command for the VLAN 102 HSRP group. What needs to be done to make the group function properly?
A. The decrement value on DSW1 should be greaterthan 11 and less than 19.
B. The decrement value on DSWTs should be greaterthan 195 and less than 205.
C. The decrement value on DSW1 should be greaterthan 5 and less than 15. 0
D. The decrement value on DSW1 should be greaterthan 9 and less than 15.
E. The decrement value on DSWTs should be greaterthan 190 and less than 200.
Answer: A
Explanation:
Explanation
The question clearly stated that there was an issue with the decrement value in VLAN 102 so we should check VLAN 102 on both DSW1 and DSW2 switches first. Click on the PC Console1 and PC Console2 to access these switches then use the "show running-config" command on both switches DSW1>enable

DSW1#show running-config DSW2>enable DSW2#show running-config

As shown in the outputs, the DSW1's priority is 200 and is higher than that of DSW2 so DSW1 becomes active switch for the group. Notice that the interface Gig1/0/1 on DSW1 is being tracked so when this interface goes down, HSRP automatically reduces the router's priority by a congurable amount, in this case 5. Therefore the priority of DSW1 goes down from 200 to 195. But this value is still higher than that of DSW2 (190) so DSW1 remains the active switch for the group. To make DSW2 takes over this role, we have to configure DSW1's decrement value with a value equal or greater than 11 so that its result is smaller than that of DSW2 (200 - 11 < 190). Therefore C is the correct answer.
