NEW QUESTION: 1
A client plans to capture the events that Document Security (Rights Management) exposes and log those events in a database. The client expects to protect over I million documents a year. Which architecture should be used to scale for this implementation?
A. Use a separate database with its own connection pool to scale in the future
B. Log all data to an Amazon S3 repository using a Workflow.
C. Use the 6DC datasource and purge records in the future to minimize space.
D. Write all events to a file on the filesystem.
Answer: B

NEW QUESTION: 2
What three are true about Oracle Flashback technology? (Choose three.)
A. FLASHBACK QUERY can be used to view committed data at any given point in time.
B. FLASHBACK DATABASE can be used to rewind a database back and forth in time.

C. FLASHBACK TABLE can be used to rewind a table back in time.
D. FLASHBACK TRANSACTION can be used to undo the changes made by a committed transaction.
E. FLASHBACK TABLE can be used to undo dropping a column from a table.
Answer: B,D,E

NEW QUESTION: 3
A programmer maliciously modified a production program to change data and then restored the original code. Which of the following would MOST effectively detect the malicious activity?
A. Reviewing system log files
B. Reviewing executable and source code integrity
C. Comparing object code
D. Comparing source code
Answer: A
Explanation:
Explanation/Reference:
Explanation:
Reviewing system log files is the only trail that may provide information about the unauthorized activities in the production library. Source and object code comparisons are ineffective, because the original programs were restored and do not exist. Reviewing executable and source code integrity is an ineffective control, because integrity between the executable and source code is automatically maintained.
