**NEW QUESTION: 1**

When host affinity policies are enabled, how does this affect the AHV cluster?

- A. Host affinity rules do not affect any other aspects of the AHV cluster.
- B. Metro Availability will no longer work as designed and will result in Split Brain.
- C. Micro segmentation rules will not be applied to VMs with affinity policies set on them.
- D. The VM-host affinity cannot be applied on a cluster that has HA reservations configured.

**Answer: A**

Explanation:

[https://portal.nutanix.com/page/documents/details/?targetId=Prism-Central-Guide-Prism-v5\\_17:mul-ahv-affinity-policies-pc-c.html](https://portal.nutanix.com/page/documents/details/?targetId=Prism-Central-Guide-Prism-v5_17:mul-ahv-affinity-policies-pc-c.html)

**NEW QUESTION: 2**

You have Azure virtual machines that run a custom line-of-business web application.

You plan to use a third-party solution to parse event logs from the virtual machines stored in an Azure storage account.

You need to recommend a solution to save the event logs from the virtual machines to the Azure Storage account. The solution must minimize costs and complexity.

What should you include in the recommendation?

- A. Azure Monitor Metrics
- B. Azure Monitor logs
- C. event log subscriptions
- D. Azure VM Diagnostics Extension

**Answer: D**

**NEW QUESTION: 3**

CORRECT TEXT

Preserving Data Quality How might you use validation rules to prevent data loss?

**Answer:**

Explanation:

Validation rules in conjunction with a roll-up summary field can be used to prevent users from adding or deleting records. To create a validation rule:

1. Build a roll-up summary on the parent object that sums the number of child records.
2. Create a validation rule on the parent object that conditionally prevents changes to the number listed in the roll-up summary field. If a user tries to add or delete a record, the validation rule prevents the user from doing that.
