Explanation:

The best answer is D.

The argument presents a substantial increase in the proportion of Afro-Americans between twenty and twenty-three who were enrolled in Gilmore Community College as evidence that there was an increase in the proportion of Gilmore Community College students who were Afro-Americans. NEW QUESTION: 4

Your network contains an Active Directory forest. The forest contains the member servers configured as shown in the following table.

All servers run Windows Server 2008 R2.

You deploy a new server named Server1.

You need to configure Server1 to provide central authentication for all dial-up connections and all VPN connections.

What should you install on Server1?

- A. Active Directory Lightweight Directory Services (AD LDS)
- B. Network Policy Server (NPS)
- C. Routing and Remote Access service (RRAS)
- D. Active Directory Federation Services (AD FS)

Answer: B

Explanation:

You can use NPS to centrally manage network access through a variety of network access servers, including wireless access points, VPN servers, dial-up servers, and 802.1X authenticating switches. (MY NOTE: NPS is the newer implementation of RADIUS, which is what is needed)

WRONG ANSWERS

RRAS is used for routing between 2 networks, not authentication. This would be used to deploy the VPN and dial-up services but does not provide authentication mechanisms.

AD LDS is used for creating application-specific or customized user stores.

AD FS is used for trusting and sharing resources between 2 organizations.
