NEW QUESTION: 1

Your company has a primary data center and a secondary data center. The primary data center contains five servers. The servers are configured as shown in the following table.

You plan to configure Server5 to protect the data from all of the servers on the network.

You need to recommend a backup solution that meets the following requirements:

- The data must be available if the primary data center fails.
- The solution must retain data for up to two years.

Which two actions should you include in the recommendation?
Each answer presents part of the solution.

- A.** Deploy a secondary DPM server to the secondary data center and configure the new DPM server to protect Server5.
- B.** Deploy a secondary DPM server to the primary data center and configure the new DPM server to protect Server5.
- C.** Deploy a primary DPM server to the secondary data center and configure the new DPM server to protect the physical disks on Server5.
- D.** On Server5, back up the data on all of the protected servers to Windows Azure Recovery Services.
- E.** On Server5, back up the data on all of the protected servers to physical disks.

Answer: A,D

NEW QUESTION: 2

DRAG DROP

You plan to deploy SQL Server 2012.

You identify the following security requirements for the deployment:

- Users must be prevented from intercepting and reading the T-SQL statements sent from the clients to the database engine.
- All database files and log files must be encrypted if the files are moved to another disk on another server.

You need to identify which feature meets each security requirement. The solution must minimize processor overhead. Which features should you identify?

To answer, drag the appropriate feature to the correct requirement in the answer area.

Answer:

Explanation:

NEW QUESTION: 3
