A Site-to-Site VPN gateway connection is used to connect your on-premises network to an Azure virtual network over an IPsec/IKE (IKEv1 or IKEv2) VPN tunnel. This type of connection requires a VPN device, a local network gateway, located on-premises that has an externally facing public IP address assigned to it.

Finally, create a Site-to-Site VPN connection between your virtual network gateway and your on-premises VPN device.

NEW QUESTION: 3

A male client had a right below-the-knee amputation 4 days ago. His incision is healing well. He has gotten out of bed several times and sat at the side of the bed. Each time after returning to bed, he has experienced pain as if it were located in his right foot. Which nursing measure indicates the nurse has a thorough understanding of phantom pain and its management?

A. Phantom pain is caused by trauma, spasms, and edema at the incisional site. It will decrease when postoperative edema decreases. It should be treated with nonnarcotic medication whenever possible.

B. Phantom pain is entirely in the client's mind. The client should be instructed that the pain is psychological and should not be treated.

C. The cause of phantom pain is unknown. The nurse should provide the client with support, promote sleep, and handle the injured limb smoothly and gently.

D. The basis for phantom pain may occur because the nerves still carry pain sensation to the brain even though the limb has been amputated. The pain is real, intense, and should be treated.

Answer: D

Explanation:

(A) This statement is entirely false. (B) Phantom pain may be caused by nerves continuing to carry sensation to the brain even though the limb is removed. It is real, intense, and should be treated as ordinary pain would. (C) Although the cause of phantom pain is still unknown, these measures may promote the relief of any type of pain, not just phantom pain. (D) Phantom pain is not caused by trauma, spasms, and edema and will not be relieved by decreasing edema.
