NEW QUESTION: 3
The Web Cache Communication Protocol (WCCP) is a
content-routing protocol that can facilitate the redirection of
traffic flows in real time. Your organization has deployed WCCP
to redirect web traffic that traverses their Cisco Adaptive
Security Appliances (ASAs) to their Cisco Web Security
Appliances (WSAs).
The simulator will provide access to the graphical user
interfaces of one Cisco ASA and one Cisco WSA that are
participating in a WCCP service. Not all aspects of the GUIs
are implemented in the simulator. The options that have been
implemented are sufficient to determine the best answer to each
of the questions that are presented.
Your task is to examine the details available in the simulated
graphical user interfaces and select the best answer.

What traffic is not redirected by WCCP?
A. Traffic sent from private address space
B. Traffic destined to public address space
