**NEW QUESTION: 3**

Which of these threats can the Firebox prevent with the default packet handling settings? (Select four.)

- A. Viruses in email messages
- B. Access to inappropriate websites
- C. Flood attacks
- D. Denial of service attacks
- E. IP spoofing
- F. Malware in downloaded files
- G. Port scans

**Answer: C,D,E,G**

Explanation:

Explanation/Reference:

B: The default configuration of the XTM device is to block DDoS attacks.

C: In a flood attack, attackers send a very high volume of traffic to a system so it cannot examine and allow permitted network traffic. For example, an ICMP flood attack occurs when a system receives too many ICMP ping commands and must use all of its resources to send reply commands. The XTM device can protect against these types of flood attacks: IPSec, IKE, ICMP, SYN, and UDP.

E: When the Block Port Space Probes (port scans) and Block Address Space Probes check boxes are selected, all incoming traffic on all interfaces is examined by the XTM device.

CG: Default packet handling can reject a packet that could be a security risk, including packets that could be part of a spoofing attack or SYN flood attack
