NEW QUESTION: 3
You are developing a C# application. The application references and calls a RESTful web service named EmployeeService. The EmployeeService web service includes a method named GetEmployee, which accepts an employee ID as a parameter. The web service returns the following JSON data from the method.
{"Id":1,"Name":"David Jones"}
The following code segment invokes the service and stores the result:

You need to convert the returned JSON data to an Employee object for use in the application.
Which code segment should you use?

A. Option B
B. Option D
C. Option C

D. Option A
Answer: C

NEW QUESTION: 4
Which of the following is the MOST important action to take
when engaging third-party consultants to conduct an attack and
penetration test?
A. Monitor intrusion detection system (IDS) and firewall logs
closely
B. Request a list of the software to be used
C. Establish clear rules of engagement
D. Provide clear directions to IT staff
Answer: C
Explanation:
It is critical to establish a clear understanding on what is
permissible during the engagement. Otherwise, the tester may
inadvertently trigger a system outage or inadvertently corrupt
files. Not as important, but still useful, is to request a list
of what software will be used. As for monitoring the intrusion
detection system (IDS) and firewall, and providing directions
to IT staff, it is better not to alert those responsible for
monitoring (other than at the management level), so that the
effectiveness of that monitoring can be accurately assessed.
