Explanation:
C: addEventListener
The addEventListener() method attaches an event handler to the
specified element.
In context of a worker, both self and this refer to the global
scope. The worker can either add an event listener for the
message event, or it can define the onmessage handler to listen
for any messages sent by the parent thread.
D: attachEvent method
Registers an event handler function (event listener) for the
specified event on the current object.

Answer:
Explanation:

Explanation

Box 1: A check-in policy
Administrators of Team Foundation version control can add
check-in policy requirements. These check-in policies require
the user to take actions when they conduct a check-in to source
control.
By default, the following check-in policy types are available:
* Builds Requires that the last build was successful before a
check-in.
* Code Analysis Requires that code analysis is run before

check-in.
* Work Items Requires that one or more work items be associated
with the check-in.
Box 2: Build policy
