**NEW QUESTION: 1**

A cloud usage metering scheme allows for which of the following customer chargeback alternatives?

- A. Direct cost
- B. Cost amortization
- C. Cost allocation
- D. Shared cost

**Answer: A**

Explanation:

CHARGEBACK METHODS

A range of approaches have been developed for implementing chargeback in an organization, as summarized

in the figure below. The degree of complexity, degree of difficulty, and cost to implement decreases from the top of the chart [service-based pricing (SBP)], to the bottom [high-level allocation (HLA)]. HLA is the simplest method; it uses a straight division of IT costs based on a generic metric such as headcount. Slightly more effort to implement is low-level allocation (LLA), which bases consumer costs on something more related to IT activity such as the number of users or servers. Direct cost (DC) more closely resembles a time and materials charge but is often tied to headcount as well. Figure, Methods for chargeback allocation.

**NEW QUESTION: 2**

Which configuration should an administrator make in Prism to receive a summary of the alerts every 24 hours?

- A. Email Digest
- B. Syslog
- C. SNMP
- D. Individual Alerts

**Answer: A**

Explanation:

Explanation

[https://portal.nutanix.com/page/documents/details/?targetId=Prism\\_Central\\_Guide-Acr\\_v4\\_6:mul\\_alerts\\_manag](https://portal.nutanix.com/page/documents/details/?targetId=Prism_Central_Guide-Acr_v4_6:mul_alerts_manag) Prism Central allows you to configure the alert messages sent by Prism Central. To configure alert settings, reporting rules, and message templates, do the following:

Note: Alert emails sent by Prism Central are in addition to any alert emails you might have configured on individual clusters through the Prism web console. You will receive email from both entities in this case.

Prism Central alert emailing is not enabled by default; you must explicitly enable it and specify the recipients (Nutanix customer support and/or supplied email addresses).

\* Do one of the following:

\* In the gear icon pull-down list of the main menu, select Alert Email Configuration.

\* In the Alerts dashboard, click the Email Configuration button.

The Alert Email Configuration window appears.

\* Click the Settings tab and do the following:

\* Enable Prism Central to send alert emails.

\* Check the Email Every Alert box to send an email whenever the event occurs.

\* Check the Email Daily Digest box to send a cumulative (24 hour) list of alerts once a day.

You can check one or both boxes. If neither box is checked, no alert emails are sent by Prism Central.

\* Check the Nutanix Support box to send alert notification to Nutanix customer support.

\* To send alert notifications to others, enter their email addresses in a comma separate list in the field below the Nutanix Support

\* Click the Apply button to apply the changes and continue the configuration (or click the Save button to apply the changes and close the window).

The Connection Status section displays mail transport status information. In this example, an SMTP server is configured for mail service. Clicking the link opens the SMTP server settings window

**Answer: C,D**

Explanation:

Explanation

Oracle supports the use of Ansible for cloud infrastructure provisioning, orchestration, and configuration management. Ansible allows you to automate configuring and provisioning your cloud infrastructure, deploying and updating software assets, and orchestrating your complex operational processes. What enables orchestrating, provisioning, and configuration management tasks are the Ansible modules for Oracle Cloud

Infrastructure. Ansible provides a library of these Ansible modules "out of the box" for managing common tasks, and libraries of custom modules from cloud providers like AWS and Azure. Oracle also provides a library of Ansible cloud modules that support provisioning and managing Oracle Cloud Infrastructure service Ansible Modules represent discrete provisioning tasks or operations that you can invoke individually from the command line, or else run individually or in sequence from a playbook Ansible roles are units of organization that allows you to abstract configuration, orchestration, and provisioning tasks into roles that you can save and share among playbooks and other users, and that are useful for organizing functionality in playbooks
