- D. Interview tab | About You screen

Answer: B

NEW QUESTION: 3

You are creating an app that uses Event Grid to connect with other services. Your app's event data will be sent to a serverless function that checks compliance. This function is maintained by your company.

You write a new event subscription at the scope of your resource. The event must be invalidated after 3 specific period of time. You need to configure Event Grid to ensure security. What should you implement? To answer, select the appropriate options in [he answer area.

NOTE: Each correct selection is worth one point

Answer:

Explanation:

Explanation

Box 1: SAS tokens

Custom topics use either Shared Access Signature (SAS) or key authentication. Microsoft recommends SAS, but key authentication provides simple programming, and is compatible with many existing webhook publishers.

In this case we need the expiration time provided by SAS tokens.

Box 2: ValidationCode handshake

Event Grid supports two ways of validating the subscription: ValidationCode handshake (programmatic) and ValidationURL handshake (manual).

If you control the source code for your endpoint, this method is recommended.

NEW QUESTION: 4

You are setting up a brand new Magento installation for a merchant who is migrating from Magento 1 to Magento 2.

Keeping in mind upgradability and the need to customize, which one do you choose?

- A. Run `php bin/magento setup:migrate <path-to-m1-installation> <new-version>` command
- B. Create a new Magento instance by using the `bin/magento install` command
- C. Create a new Magento instance using `composer create-project`
- D. Clone the `magento/magento2` GitHub repository

Answer: C
