**NEW QUESTION: 2**

On Cisco IOS XR software, what is the default commit option?

- A. psuedo-atomic
- B. replace
- C. force
- D. best-effort

**Answer: A**

Explanation:

## Explanation

### **NEW QUESTION: 3**

Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1 that runs Windows Server 2012 R2. DC1 has the DHCP Server server role installed.

DHCP is configured as shown in the exhibit. (Click the Exhibit button.)

You discover that client computers cannot obtain IPv4 addresses from DC1.

You need to ensure that the client computers can obtain IPv4 addresses from DC1.

What should you do?

- A. Disable the Allow filters.
- B. Activate the scope.
- C. Disable the Deny filters.
- D. Authorize DC1.

### **Answer: A**

Explanation:

You have enabled the Allow list but haven't entered any MAC addresses, thus everyone is denied. Either Disable the Allow filters or start adding MAC addresses to the Allow filter.

Note: MAC address based filtering allows specific control over which clients have access to DHCP addresses. You can create a list of computers that are allowed to obtain DHCP addresses from the server by adding the client MAC address to the list of allowed client computers. By enabling the allow list, you automatically deny access to the DHCP server addresses to any client computer not on the list.

Reference: DHCP: If the allow list is enabled, MAC address filtering should be populated
