NEW QUESTION: 2

Refer to the exhibit.

Which command prints out (44, 22) when this code is run on Python 3?

- A. `print(swap2(a, b))`
- B. `print(swap2(22, 44))`
- C. `print(swap1(b, d))`
- D. `print(swap1(d, b))`

Answer: C

NEW QUESTION: 3

Amazon EC2 instances, including Amazon Linux instances, have a default user named `ec2-user`. To run a command as `ec2-user` on an Amazon Linux instance, you can use the `sudo` command. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`. The `sudo` command is installed on Amazon Linux instances by default. However, it is not installed on Amazon Linux instances that are running the Amazon Linux 2018.03 release. To install `sudo` on an Amazon Linux 2018.03 instance, you can run the following command as `root`: `sudo yum install sudo`. After you install `sudo`, you can run the `sudo` command as `ec2-user` to run a command as `ec2-user`. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`. The `sudo` command is installed on Amazon Linux instances that are running the Amazon Linux 2018.03 release by default. However, it is not installed on Amazon Linux instances that are running the Amazon Linux 2018.03 release. To install `sudo` on an Amazon Linux 2018.03 instance, you can run the following command as `root`: `sudo yum install sudo`. After you install `sudo`, you can run the `sudo` command as `ec2-user` to run a command as `ec2-user`. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`.

A. AWS

Lambda instances, including Amazon Linux instances, have a default user named `ec2-user`. To run a command as `ec2-user` on an Amazon Linux instance, you can use the `sudo` command. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`. The `sudo` command is installed on Amazon Linux instances by default. However, it is not installed on Amazon Linux instances that are running the Amazon Linux 2018.03 release. To install `sudo` on an Amazon Linux 2018.03 instance, you can run the following command as `root`: `sudo yum install sudo`. After you install `sudo`, you can run the `sudo` command as `ec2-user` to run a command as `ec2-user`. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`.

B. `sudo` command is installed on Amazon Linux instances by default. However, it is not installed on Amazon Linux instances that are running the Amazon Linux 2018.03 release. To install `sudo` on an Amazon Linux 2018.03 instance, you can run the following command as `root`: `sudo yum install sudo`. After you install `sudo`, you can run the `sudo` command as `ec2-user` to run a command as `ec2-user`. For example, to run the `ls` command as `ec2-user`, you would run `sudo ls`.

C. StatusCheckFailed_System is a system status check that indicates that the instance has failed a system check. This check is performed during the instance boot process. If the instance fails this check, the instance is in the `pending` state. You can view the status of the instance by running the `aws ec2 describe-instances` command. For example, to view the status of the instance, you would run `aws ec2 describe-instances --instance-ids i-12345678 --query 'Instances[0].StatusCheck[0].Status'`. The output of this command is `pending`.

D. `AutoScaling` is a service that automatically adjusts the number of EC2 instances in your fleet based on your needs. You can create an Auto Scaling group and launch instances into the group. The group will automatically scale the number of instances up or down based on the `DesiredCapacity` property of the group. For example, to create an Auto Scaling group, you would run `aws autoscaling create-auto-scaling-group --group-name my-asg --min-size 1 --max-size 10 --desired-capacity 5`.

Answer: A
